

In the Claims

Pursuant to Examiner's claims rejections under 35 U.S.C. 102 and 103, Applicant hereby submits amended claims, including  
5 a complete listing of all claims in the application with the status of each claim in parentheses.

Claims 1-14 (canceled).

10 15. (currently amended) Apparatus for attaching auxiliary eyeglasses to conventional eyeglasses comprising: a single appendage formed on each of two sides of said auxiliary eyeglasses, each said appendage containing magnetic material on  
said auxiliary eyeglasses; said magnetic material capable of  
15 fitting solely below and mating with magnetic material on said conventional eyeglasses, whereby said auxiliary eyeglasses are capable of being removably secured to conventional eyeglasses  
such that said auxiliary eyeglasses are aligned with said conventional eyeglasses.

20

16. (previously presented) Apparatus according to claim  
15 including appendages on said conventional eyeglasses; said magnetic material on said auxiliary eyeglasses mounted on said appendages.

25

17. (previously presented) Apparatus according to claim 16 including temple extensions on said conventional eyeglasses; said magnetic material on said conventional eyeglasses being on said temple extensions.

5

18. (previously presented) Apparatus according to claim 17 including sockets on said appendages; said magnetic material being mounted in said sockets on said appendages.

10

19. (previously presented) Apparatus according to claim 18 including sockets on said temple extensions; said magnetic material being mounted in said sockets on said temple extensions.

15

20. (previously presented) Apparatus according to claim 19 in which said sockets on said appendages are cylindrical sockets.

20

21. (previously presented) Apparatus according to claim 20 in which said sockets on said temple extensions are cylindrical sockets.

22. (previously presented) Apparatus according to claim 21 in which said magnetic material on said appendages is a magnet mounted in each cylindrical socket.

5 23. (previously presented) Apparatus according to claim 22 in which said magnetic material mounted on said temple extensions is a magnet mounted in each cylindrical socket.

10 24. (currently amended) Apparatus for attaching auxiliary eyeglasses to conventional eyeglasses comprising: temple extensions on said conventional eyeglasses having a first mating surface; a single appendage on each of two sides of appendages ~~on~~ said auxiliary eyeglasses, each appendage having a second mating surface; and, said second mating surface capable of being  
15 secured solely below said first mating surface by magnetic material whereby said auxiliary eyeglasses are capable of being removably secured to said conventional eyeglasses such that said auxiliary eyeglasses are aligned with said conventional  
eyeglasses.

20 25. (currently amended) Apparatus for attaching auxiliary eyeglasses to conventional eyeglasses comprising: temple extensions on said conventional eyeglasses having first mating surfaces; appendages on said auxiliary eyeglasses, all said

appendages having second mating surfaces; said second mating surfaces capable of being mounted solely below said first mating surfaces by magnetic attraction whereby said auxiliary eyeglasses are capable of being removably ~~removable~~ secured to  
5 said conventional eyeglasses.

26. (currently amended) A method of attaching auxiliary eyeglasses to conventional eyeglasses comprising: providing a single appendage on each of two sides of said auxiliary  
10 eyeglasses, each appendage having magnetic material ~~on said auxiliary eyeglasses~~ that is capable of fitting solely below and mating with magnetic material on said conventional eyeglasses; whereby said auxiliary eyeglasses are capable of being removably secured to said conventional eyeglasses.

15

27. (currently amended) Apparatus for attaching auxiliary eyeglasses to conventional eyeglasses comprising: temple extensions on said conventional eyeglasses having first sockets; a single appendage on each of two sides of appendages on said  
20 auxiliary eyeglasses, each of said appendages having second sockets; magnetic material on either said conventional eyeglasses or said auxiliary eyeglasses capable of mounting said second socket solely below said first socket whereby said auxiliary eyeglasses are capable of being removably secured to

said conventional eyeglasses such that said auxiliary eyeglasses are aligned with said conventional eyeglasses.

28. (currently amended) Apparatus for attaching auxiliary  
5 eyeglasses to conventional eyeglasses comprising: temple  
extensions on said conventional eyeglasses having first sockets;  
a single appendage on each of two sides of appendages on said  
auxiliary eyeglasses, each of said appendages having second  
sockets; said second sockets capable of being mounted solely  
10 below said first socket by magnetic attraction of magnetic  
material on at least one of said conventional eyeglasses or  
auxiliary eyeglasses whereby said auxiliary eyeglasses are  
capable of being removably secured to said conventional  
eyeglasses such that said auxiliary eyeglasses are aligned with  
15 said conventional eyeglasses.
